

Using audits and EBM to implement change in PIV products, practice, policy and people

Join us for this special clinical education event

Overview

Program description

All too often, implementing change into the healthcare environment—even those which have been proven to improve outcomes—is met with seemingly insurmountable obstacles. Understanding clinical practice guidelines (CPG) and evidence-based medicine (EBM) is critical as clinicians overcome barriers and navigate change toward the advancement of patient care. This presentation will focus on effectuating change through a healthcare audit of current products, practice, policy and people and implementation strategies toward successful improvement of vascular access practice.

Program details

Presenter

Russell Nassof, Esq

Learning objectives

Objectives for this presentation are:

- Understand the difference between CPGs and EBM and their effect on current practice and policies.
- Identify the elements of a healthcare audit as well as the need for regular and systematic vascular access audits of products, practice, people and policy.
- Discuss how the pre- and post-audit process can effectuate change and result in positive improvements in vascular access.
